Professional Summary

Full-Stack Web Developer with hands-on full-stack project experience and a Communication Engineering background. Currently completing an intensive program at The Digital Hub. Fast learner, detail-oriented, and eager to contribute to modern software projects.

Education & Training

The Digital Hub – Full-Stack Web Development Program – Beirut, Lebanon

Jul 2025 – Dec 2025

- Constructed responsive full-stack apps based on MERN, Next.js, and Laravel architectures.
- Developed RESTful APIs through Express.js, Next.js, and Laravel frameworks.
- Built informative and dashboard-driven web systems for fintech and multi-role users.
- Practiced Agile methodology using Jira workflows, sprint retrospectives, and daily updates.
- Adopted SOLID principles and reusable design structures.
- Applied UI/UX techniques to improve product usability.

Lebanese International University – Science of Communication Engineering – Saida, Lebanon

Aug 2018 – Jun 2021 (undergraduate)

- Gained foundational knowledge in networking, IT, programming, and digital systems.

CIS College – Graphic Design Diploma – Saida, Lebanon

Sep 2020 – Jun 2021

- Learned graphic design principles, visual communication, and multimedia production.

Professional Experience

Freelance Web Developer – Self-Employed , (Remote)

2025 – Present

- Developing custom websites and web-based applications for real, paying clients, including business systems such as POS solutions for the food and retail sector. Responsible for building end-to-end features covering cashier operations, order management, reporting, expenses, and inventory workflows. Delivering full-stack solutions using Laravel , React js , and MySQL, while working directly with client

Freelance Web Developer – Al Mooradi's Workspace, (Remote)

Mar 2026 – Present

- Collaborated within a distributed remote team to develop features for large-scale, international projects, utilizing GitHub for version control and code reviews.
- Managed project workflows and executed modular assignments via ClickUp, taking ownership of complex, task-based deliverables from conception to completion.

Project Experience

Electronics POS and Management System

- Designed and implemented a **full-stack POS & Inventory Management System**. Built role-based access control (Admin, Clerk, accountant), product and category modules, interface for delivery guy and shopping page for client.

[GitHub Repo](#) | **Tech Stack:** MERN

MH-C Academy

- Developed a fully informative website, with a Content Management System (CMS) with role-based access control to enable dynamic content updates by authorized users.

[GitHub Repo](#) | **Framework:** Laravel

LEB-EX

• LEB-EX is a modern full-stack web platform designed to help local businesses manage their operations efficiently through a centralized, role-based system

The platform focuses on scalability, security, and real-world business workflows.
